

FOR IMMEDIATE RELEASE

FSI Defense Joins Team Apache to Advance AH-64 Training and Readiness

Supports advanced AH-64 training and operational readiness for military operators worldwide.

DALLAS, TX (April 13, 2026) – FSI Defense, a FlightSafety International company, today announced it has joined Team Apache, an alliance of AH-64 program stakeholders dedicated to advancing training and readiness of the world’s premier attack helicopter.

“FSI Defense is honored to join Team Apache and contribute our decades of experience in advanced simulation and flight training,” said Dan Davis, President, FSI Defense. “Collaboration across the Apache community is essential to ensuring aircrews are prepared for the complexity and demands of modern operations.”

Backed by FlightSafety’s 75-year legacy of flight training and innovation, FSI Defense delivers immersive, mission-focused training solutions designed to enhance operational readiness, safety, and performance. Through close collaboration with Boeing, the aircraft’s Original Equipment Manufacturer (OEM), FlightSafety is designing and manufacturing a new fleet of full-motion, high-fidelity AH-64E Full-Flight Simulators to support U.S. and international military operators. Produced at FlightSafety’s Broken Arrow, Oklahoma, manufacturing facility, these next-generation simulators feature the largest simulated dome on motion ever built, delivering an exceptional level of realism and immersion.

FSI Defense’s advanced simulation solutions enable both entry-level and experienced pilots to train for the most demanding operational scenarios, including degraded visual environments, system malfunctions, and power-loss emergencies. By providing a safe, repeatable, and highly realistic training environment, these simulators enhance readiness while reducing operational risk.

Team Apache brings together industry, government, and operational partners to support a global fleet of more than 1,300 Apache helicopters. As a member of the alliance, FSI Defense will collaborate closely with Team Apache partners to help drive the continued evolution and sustainment of the world’s most advanced and combat-proven attack helicopter.

About FSI Defense

FSI Defense, a FlightSafety International company, is a leading provider of aviation training, simulation, and advanced technology for military and government partners worldwide. Backed by FlightSafety’s 75-year legacy of innovation, FSI Defense delivers immersive, mission-focused training solutions for aircrews designed to enhance operational readiness, safety, and performance. Serving all branches of the U.S. Military, the U.S. Coast

Guard, government agencies, and international defense partners, FSI Defense operates across a global network of 70+ military bases and Learning Centers. Its capabilities span a wide range of aircraft platforms and mission requirements, supporting mission-critical training programs, such as multi-role simulation for pilots, loadmasters, boom operators, flight engineers, and specialized training for gunnery stations and hoist operations.
